QUICK INSTALLATION GUIDE

The Weather module allows you to monitoring the outside temperature as the wind speed, in addition to atmospheric pressure already present on your dashboard.

Connecting the Weather Module

- Add the Weather Module to your installation by logging into your customer account, click on "My Home " icon, then "My modules". Click "ADD MODULE" and enter the module number and the security number found on the back of the module.
- Wait a minute.
- Connect the plug of the weather station to the Weather module.
- Stay close to the Kub when you remove the tab from the battery of the Weather module to put the module into service.
- Clip the Weather module in the weather station, and fix it outside, in a place expose to the wind.

Your Weather Module is now in ready to go.

For more details please read the user's guide, available in your "Customer account".
